

Applicability Validator

The APPLICABILITY VALIDATOR is a tool that allows to get an excel file with the values of if a task applies or not in an Airbus MPD for a specific MSN.

How to generate it

The process to get the file is simple. Once the previous step (APPLICABILITY SHEET) is finished, you just have to select (explore or drag-and-drop) the MPD excel file from Airbus you want to get (circled in red), being the same used in the previous step, and the APPLICABILITY SHEET completely filled (circle in blue), and without any extra format or formula in it (follow its manual).

The screenshot shows a web interface titled "APPLICABILITY VALIDATOR". Below the title is a descriptive paragraph: "With this application you will be able to get the results of the applicability. For that it is necessary to upload the MPD file corresponding the aircraft, and the excel sheet with all the applicability cases filled with the information for the corresponding aircraft." There are two file upload sections. The first is labeled "MPD file:" and contains a text box with "Browse..." and "No file selected.", which is circled in red. The second is labeled "Applicability sheet file:" and contains a text box with "Browse..." and "No file selected.", which is circled in blue. Below these are two buttons: a blue "TRANSFORM" button and a grey "DOWNLOAD" button.

Once both files are uploaded, the TRANSFORM button will become active, click it to transform the file. If the transformation process is a success, the DOWNLOAD button will become green, and then it will be possible to download the APPLICABILITY VALIDATOR excel file.

If the DOWNLOAD button does not turn green, that will mean some error has been found. Check that the selected files are the correct ones, and the APPLICABILITY SHEET is correctly filled. If the problem persists, please contact the developer.

The downloaded file should look like the following image.
